Title 'The Arrival ' New work

Ever since early man first discovered and harnessed the power of fire, the World was never the same again. The constant search for new energy sources paved the way for birth of the coal industry when steam engines powered our industries.

The discovery of fossil fuel further revolutionized our progress but with detrimental side effects of the environment. This has lead to research and to the introduction of a new source that is both environmentally friendly and self sustaining, by using nature to create energy. We have now arrived at a new dawn but the evolution continues .
